Glasswatch

AI-Driven Patch Management for Enterprise Security Teams

Stop drowning in CVEs.
Start patching with intent.

Alpha Access Open April 2026

> "Anthropic's Mythos can autonomously identify previously unknown vulnerabilities, generate working exploits, and carry out complex cyber operations with minimal human input. The fallout — for economies, public safety, and national security — could be severe."
>
> ANTHROPIC — April 2026 · Mythos Preview announcement · Median time to exploit: **< 4 hours**

THE PROBLEM

The Patch Management Crisis

57,000+

Open vulnerabilities in the average enterprise at any given time (Industry data)

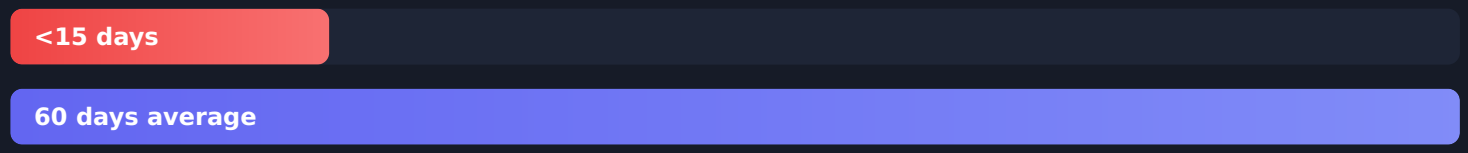
60d

Mean time to patch critical vulnerabilities — while attackers exploit in **<15 days**

80%

Of breaches exploit known vulnerabilities with available patches already published

ATTACKER EXPLOIT WINDOW VS. ENTERPRISE PATCH CYCLE



The gap between disclosure and enterprise patching is where breaches happen.

> "Security teams aren't failing — they're overwhelmed."

ROOT CAUSE

Why Patch Management Fails

Too Much Noise

CVSS scores rank everything as critical. With thousands of high-severity CVEs, nothing is actually prioritized. Teams spend more time triaging than patching.

Result: Teams patch the loudest vulns, not the riskiest ones.

No Business Context

CVEs are technical artifacts. Executives speak in risk, compliance, and business outcomes. There's no shared language between the security team and leadership.

Result: "We patched 300 CVEs" means nothing in a board meeting.

Broken Workflows

Security finds vulnerabilities. IT patches them. No shared tooling, no common language, no handoff process. Tickets get lost. Windows get missed. Audits get failed.

Result: Blame travels faster than patches do.

These aren't people problems. They're **tooling and process** problems — and they're solvable.

THE SOLUTION

Glasswatch: Patch with Intent

Tell us your goal. We build the plan.

Set a plain-English objective. Glasswatch's AI generates the optimal patch schedule, fits your maintenance windows, and tracks execution to completion.

STEP 01 · DEFINE

Set Your Goal

"Eliminate all KEV vulnerabilities by June 30" — type it in plain English. No spreadsheets, no manual triage.

```
"Patch all CISA KEV vulns by
June 30, prioritizing
internet-facing assets"
```

→

STEP 02 · OPTIMIZE

AI Builds the Plan

AI analyzes risk scores, asset criticality, maintenance windows, and team capacity to generate an optimal patch schedule you can review and approve.

→

STEP 03 · EXECUTE

Ship & Prove It

Approve patch bundles, track real-time execution status, collect audit evidence automatically. One platform from objective to compliance proof.

✦ **From objective to evidence in one platform.**

PRODUCT

What Glasswatch Does

Goal-Based Optimization

Define outcomes, not tasks. AI generates the optimal patch schedule from your business objective.

Bundle Execution Engine

Group patches into maintenance windows. Approve, execute, and rollback with a single click.

AI Assistant

"What needs my attention?" — real-time answers backed by live vulnerability and asset data.

Compliance Dashboard

CISA BOD 22-01, SOC 2, and PCI DSS posture status at a glance — always audit-ready.

Real-Time Alerts

KEV alerts, SLA warnings, and bundle events delivered via Slack, Microsoft Teams, or email.

NLP Governance Rules

"No deployments on Fridays after 3pm" → enforced policy. Write rules in plain English.

INTEGRATIONS

Works With Your Stack

VULNERABILITY SCANNERS

- Tenable
- Qualys
- Rapid7
- CSV Import

TICKETING & ITSM

- Jira
- ServiceNow

NOTIFICATIONS

- Slack
- Microsoft Teams
- Email

IDENTITY & SSO

- Google OAuth
- GitHub
- WorkOS SSO
- Okta
- Azure AD

THREAT INTELLIGENCE

- CISA KEV
- NVD
- EPSS
- Anthropic Claude

COMING SOON

- VulnCheck
- GreyNoise
- Splunk
- Elastic SIEM

Open API first. Everything that goes in can come out. SIEM push, CMDB sync, evidence export — all via REST API.

INTELLIGENCE

8-Factor AI Risk Scoring

CVSS Base Score

Foundation severity rating

EPSS Score

Exploit Prediction Scoring System

KEV Status

CISA known-exploited vulnerability

Asset Criticality

Business impact of the affected asset

Internet Exposure

Attack surface reachability

Patch Availability

Is a fix available right now?

Runtime Context

Is the service running in production?

Exploit Availability

Public exploit code in the wild?

EXECUTION

From Plan to Proof

Draft

AI groups vulnerabilities by asset, environment, and risk score. Schedules fit within defined maintenance windows.

→

Pending Approval

One-click approval workflow with pre-flight risk check. Change advisory board notifications included.

→

Approved

Execution window is reserved. Team members are notified. Runbook and rollback plan attached.

→

In Progress

Real-time patch status per asset. Live progress tracking. Instant rollback on failure detection.

→

Completed

Full audit trail generated. Compliance evidence packaged automatically. MTTP metrics updated.

100%

Audit trail coverage

Auto

Evidence generation

1-Click

Emergency rollback

COMPLIANCE

Prove Compliance, Not Just Compliance Theater

CISA BOD 22-01

Known Exploited Vulnerabilities

Track KEV patching progress against CISA-mandated deadlines. SLA countdown per CVE. Automatic breach warnings before deadlines expire.

SOC 2 TYPE II

Continuous Security Controls

% critical vulns patched within 30 days. % high within 90. Evidence export ready for auditors. No scrambling at audit time.

PCI DSS

Payment System Security

Track % of internet-facing assets with zero critical vulnerabilities. Automated scope documentation and evidence packaging.

MTTP METRICS

Mean Time To Patch by severity, environment, and team

PDF EXPORT

One-click audit report generation for any date range

SIEM / CMDB

REST API for automated evidence push to existing tools

COMING SOON

FedRAMP, HIPAA, ISO 27001 frameworks

EARLY ACCESS

Early Access — What You Get

✓ **Full Platform Access**
Every feature enabled. No artificial limitations. Full production-grade deployment.

✓ **Zero Infrastructure Overhead**
Hosted on Railway. We handle deployments, scaling, and uptime. You just log in.

✓ **Direct Line to Founders**
Slack connect, weekly check-ins. Your issues get fixed fast — not ticketed into a backlog.

✓ **Roadmap Influence**
Alpha customers shape the product. Your workflows become features. Your pain points get prioritized.

VISION

Where We're Headed

Q3 2026

Enterprise identity, audit infrastructure, and global scale

- WorkOS SSO
- Audit Log
- Evidence Packages
- Multi-Region Hosting

Q4 2026

Live threat intelligence feeds and autonomous asset discovery

- Live NVD / EPSS Sync
- VulnCheck Integration
- GreyNoise Feeds
- Asset Auto-Discovery

2027

Full ITSM integration, autonomous remediation, and mobility

- Jira Two-Way Sync
- ServiceNow Two-Way Sync
- Auto-Remediation Playbooks
- Mobile App
- Slack / Teams Bot

Always

Expanding compliance coverage and community integrations

- FedRAMP
- HIPAA
- ISO 27001
- Community Scanner Integrations
- Open API

Ready to patch with intent?
